Thanks to all for the info on the audio output transformers. As soon as somebody mentioned tape recorder the bells went off and I remembered that old reel to reel model my father had. It was by Webcor. When the mechanism went bad and Dad decided it was too expensive to fix, I pulled the amp out and used it as my Hi-Fi amp during my high school days. Can't remember what ever happened to that amp. I wish ...

As an experiment I hooked up one of those Webcor transformers to my 3A4 receiver. The improvement in performance was amazing. I guess it's not surprising that a pentode would like to see a larger load. The volume in a set of 8 ohm headphones was good but the best performance was had with the HS-16A (100 ohm) phones was best. Unfortunately, the HS-16A must be the most uncomfortable headphones ever designed. At this point, the addition of an

additional audio stage would require a volume level pot since the stronger stations already are at full headphone volume.

Eric, WD6DGX

have for sale the above mentioned reciever and spkr, will sell
or will consider trade for R-390-A with top & bottom covers & a manual, in
equal condition. the SX28 is in nice cosmedic condition will come with
manual copy. spkr works, but recomend reconing, for best audio quality.
